PROFESSIONAL SUMMARY

Detail-oriented B.E. Computer Science and Engineering (AI & ML) undergraduate with hands-on proficiency in **Python**, **Object-Oriented Programming**, **Data Structures & Algorithms**, and foundational **Machine Learning** and **Data Science** concepts. Experienced in building functional applications, debugging code, and collaborating on team-based technical projects through internship and hackathon exposure. Proficient in **Git/GitHub** version control and eager to contribute to software development, AI/ML, and data-driven projects. Seeking internship and entry-level opportunities to apply analytical thinking, problem-solving, and software engineering fundamentals to real-world challenges.

TECHNICAL SKILLS

Programming Languages: Python, Java (Basics), C++ (Basics), SQL (Basics)

Technologies & Tools: Git, GitHub, Tkinter (GUI Development), VS Code, Jupyter Notebook, MS Excel

CS Core Concepts: Data Structures, Algorithms, Object-Oriented Programming (OOP), SDLC, Debugging, Testing

AI/ML & Data Science: Machine Learning Fundamentals, Data Analysis, Data Processing, Data Visualization

Soft Skills: Team Collaboration, Communication, Analytical Thinking, Adaptability, Time Management

PROJECTS

Typing Speed Tester — Desktop Application | Python, Tkinter, OOP

- Designed and developed a **GUI-based desktop application** using **Python** and **Tkinter** to measure real-time typing speed (WPM) and accuracy, delivering an offline-first tool for tracking user performance.
- Implemented **event-driven programming** and **OOP principles** to build a modular, reusable codebase; applied **debugging** and unit testing to ensure reliable user interaction.
- Enhanced **user interface** responsiveness, strengthening skills in **application development**, software testing, and UX design.

Academic Mini Projects — AI & Data Science Practice | Python, Pandas, NumPy, Matplotlib

- Built multiple **Python-based mini projects** involving **data handling**, **data processing**, and basic visualization to reinforce **machine learning** and **data analysis** fundamentals.
- Applied **debugging**, code refactoring, and **version control (Git/GitHub)** workflows to manage source code and track iterations.
- Strengthened understanding of **algorithms**, **data structures**, and analytical problem-solving through hands-on implementation.

INTERNSHIP EXPERIENCE

Infosys Springboard 6.0 — Virtual Internship Program

- Completed a structured internship program covering **software development practices**, emerging technology concepts, and industry-standard workflows, gaining exposure to real-world professional environments.
- Collaborated with peers on **guided technical assignments** and mini projects, sharpening **teamwork**, communication, and cross-functional collaboration skills.
- Practiced **problem-solving** and analytical thinking through hands-on exercises aligned with current industry demands in AI, ML, and software engineering.

EDUCATION

B.E. Computer Science & Engineering (Artificial Intelligence & Machine Learning)

V.S.B Engineering College, Karur

Currently Pursuing

SSLC & HSC

King Universe Matriculation Higher Secondary School

Completed

CERTIFICATIONS & ACHIEVEMENTS

- Infosys Springboard 6.0 Internship** — Certificate of Completion
- GHCI '25 Hackathon** — Participation Certificate (Grace Hopper Celebration India)
- Active participant in AI, Machine Learning, and Data Science workshops, technical seminars, and college coding events
